KINALI

Test-it-off
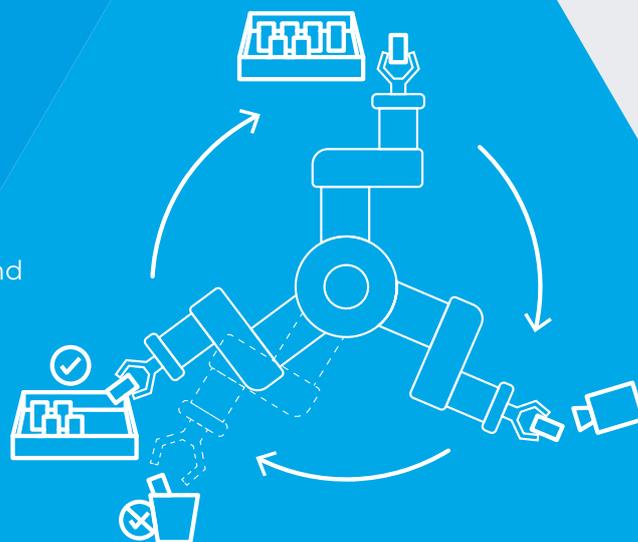

Automate your product testing
Leave it to robots!

**Test-it-off
is a robotic quality controller that**

never gets tired,
even when working
overtime

is always accurate,
reliable and fast

is effective
and uses every second
of working time

never leaves for the
competition and doesn't
want a wage increase

**Get on the wave of Industry 4.0
and use human potential better
than with repetitive activities!**

From the box or conveyor, Test-it-off
playfully sorts out defective pieces
from your products. The intelligent
robotic system brings objectivity to
the quality control process and you
receive accurate statistics on the state
of production.

www.kinali.cz

Switch to offline robotic product quality testing. You will be able to test them independently of the cycle or service intervals of production lines. You can afford more detailed testing and use a wider range of testing apparatus.

A simple „bin picking" testing system you fall in love with. Thanks to the intuitive configuration, anyone can use it! The test-it-off is adaptable and finds its place in every industry.

Electrical engineering
Operation of ICT testers

Plastics
Control of moulding completeness

Automotive
Quality control of semi-finished products

Engineering
Verification of machined part dimensions

Manufacturing companies
Verification of bulk products in containers

Test-it-off robotic system characteristics:

▶ **Indiscriminate** – accepts products at the entry in any form, preferably just scattered in a box

▶ **Absolutely safe** – uses AUBO collaborative robots for handling

▶ **Easy to use** – programming by writing a script, graphic editor but also augmented and virtual reality

▶ **Variable** – supports a wide range of quality control tools such as mechanical and electrical testing or optical control using artificial intelligence

▶ **Intelligent** – quickly learns what is, and what is not a defect

▶ **Affordable** – fast return on investment within two years

▶ **Ready for Industry 4.0** – offers a wide range of connectivity and statistics for surrounding production nodes

▶ **Absolutely reliable** – able to test in <500 ppm mode

▶ **Tireless** – works 24/7
